

TECH DRIVEN. PEOPLE POWERED.

Solution Brief: Wingman Cloud Security

Maintaining consistent security posture across different cloud environments is a complex and sometimes difficult task for most organisations to achieve. SEP2's Wingman Cloud Security, powered by Wiz, offers a comprehensive service to secure your cloud environments from coding to deployment to run time.

Cloud environments have become an everyday and key component of most organisations' digital strategies, with over 90% of companies having at least some cloud components in use.¹ However, with 80% of data breaches and 36% of serious cloud security leaks being due to misconfiguration, the use of cloud is exposing organisations to more risk than previously experienced.²

Organisations want to take advantage of the flexibility and adaptability of cloud computing but the challenge of leveraging it within introducing additional security risks remains a persistent concern. Wingman Cloud Security allows you to use cloud computing without compromising your established security posture.

Multi-Cloud

Not only are most companies using cloud computing, but the use of multi-cloud environments is becoming ever more common. This shift, however, demands a deep understanding of how each platform should be configured, awareness of best practices, and careful consideration of the unique security challenges each environment presents.

By applying the correct security controls across each applicable cloud provider, Wingman Cloud Security ensures that your multi-cloud strategy can be executed without exposing your organisation to unnecessary risks.

Rapid Onboarding

Using the world's first API-driven cloud security platform to scan and ingest your cloud environment, SEP2's Wingman Cloud Security service reduces onboarding and protection time from hours—or even days—to just minutes.

Redefining DevOps Security Controls

Wingman Cloud Security is designed to integrate security measures and checks into the earliest possible stages of the software development lifecycle. Identify and address vulnerabilities and misconfigurations proactively during the planning, coding, and testing phases, rather than discovering them later in the development process.

Threat Centre

See all threats in one place and track your security posture with intuitive, customisable and clever dashboards. Gain real-time visibility and deep contextual analysis to proactively identify and prioritise critical security risks and attack paths, and empower your organisation to maintain a strong security posture and limit potential breach exposure.

Compliance

Work towards recognised industry standards and frameworks to achieve compliance certification. Whether it's DORA, NIST, PCI-DSS, or others, ensure your cloud environments become a straightforward win on the path to certification. From established infrastructure to greenfield deployments, organisations of all sizes face compliance requirements, and Wingman Cloud Security can be deployed at any stage to deliver immediate return on investment.

Integrate

Platforms should not be isolated but enrich each other through shared integrations. Wingman Cloud Security allows you to bring your platforms together, ensuring your cloud data and alerting are available where they need to be. Bring all alerts into your SIEM, SOAR or service desk to ensure that information can be seen without needing another platform open at all times.

Service levels

At SEP2, we recognise that not every organisation has the same needs, nor are they at the same place in their cloud journey and knowledge. To help cater to all, Wingman Managed Cloud Security comes in different packages designed to best fit all types and sizes of organisations.

From basic deployment and support services for organisations with skilled cloud teams of their own, to automated configuration issue detection through to fully automated configuration remediation, Wingman Cloud Security offers a spectrum of options to enhance and improve your cloud security posture.

*BESPOKE PACKAGE AVAILABLE. ADDITIONAL SERVICES ON REQUEST.

FEATURES*	BASIC	STANDARD	ENHANCED
RAPID ONBOARDING SPRINT			
CRITICAL RISK ASSESSMENT			
KNOWLEDGE TRANSFER SESSION			
UNLIMITED OFFICE HOUR SUPPORT			
VENDOR ISSUE ESCALATION			
EXTENDED ONBOARDING WINDOW			
UNLIMITED CHANGES AND INTEGRATIONS			
IN-DEPTH REVIEW OF FINDINGS AND REMEDIATION ADVICE			
PERIODIC REVIEW OF CLOUD ESTATE HEALTH			
24X7 MONITORING OF ALERTS VIA SEP2 SOC			
ALERT TRIAGE AND RESPONSE			
ACCESS TO SEP2 CLOUD ARCHITECTS
